Time is Money

That is why we made the Gearbox Pool & Exchange Service as smooth as possible for you.

Moventas replacement gearboxes represent the latest in drivetrain technology and are designed to meet the toughest demands of modern day wind turbine operation.

We stock and offer a range of new and refurbished replacement gearboxes for a wide range of turbines, for many different turbine types. Replacement gearboxes are available to end user customers, O&M companies and OEMs alike.

Gearbox Pool & Exchange Service

With the straightforward service, you receive a refurbished replacement gear in exchange for your damaged gear. You are then invoiced for the repair of the damaged gear, which is returned to the gear pool for future use. In some cases, a new gearbox will be supplied by agreement with the customer.

Gearbox pools operate close to our customers and replacement gearboxes may be on your site within three days. Moventas also stores gearboxes fully accessorized, thus minimizing turbine downtime and exchange costs. As the damaged gearbox is removed; the new fully accessorized gearbox is installed using the same crane and service team.

Gearbox Reverse Engineering Program

Moventas has already successfully reverse engineered, repaired, overhauled, upgraded and supplied many popular gearboxes from other wind turbine manufacturers. This is a continuous process. New gearboxes enter the program for reverse engineering as the need arises.

Benefits

- **Instant access to a new or refurbished gearbox.**
- **Reduced downtime due to prolonged delivery.**
- **Crane and service team only required for one site visit.**
- **Single source supply and reduced risk from old damaged or contaminated accessories.**

In addition, we accept and service gearboxes of other manufacturers. These gearboxes will enter the Moventas Reverse Engineering Program and eventually the Gearbox Pool.

moventas

|GEARED FOR
NEW ENERGY

Moventas is one of the world's leading gear manufacturers. Moventas offers power transmission solutions to, for example, wind energy, pulp and paper as well as the mining industry, and comprehensive services for the overhaul, maintenance and remote management of power transmission machinery. Globally operating Moventas is part of the global engineering group Clyde Blowers.
